EUROPEAN AGENCY STATISTICS ON INCLUSIVE EDUCATION

Cyprus 2012/2013 data background information

European Agency for Special Needs and Inclusive Education
BACKGROUND INFORMATION

How the official decision of special educational needs (SEN) used in the country relates to the agreed EASIE operational definition:

An official decision leads to a pupil being recognised as eligible for additional educational support to meet their learning needs.

Pupils’ legal entitlements under what legislation

According to the Education and Training of Children with Special Needs Laws 1999–2014, pupils are considered to have special needs and are eligible for additional support if they have a serious learning, special learning, functioning or adjustment difficulty, caused by physical, intellectual, psychological or other disabilities and having need of special education and training. A child has learning, special learning, functioning or adjustment difficulties if:

- they have seriously greater difficulties than the majority of children of the same age, or
- they have a disability which excludes or hinders them from accessing the educational means that schools generally provide for children of the same age.

How additional support is understood within the country context

Additional support involves extra teaching hours by classroom teachers (in secondary and primary education) or a special education teacher and/or speech therapist (in kindergarten, primary schools and special schools), or physiotherapist and/or occupational therapist and/or music therapist (in special schools), and the provision of technical equipment, assistive technology or care assistants.

The criteria for an official decision are:

There has been an educational assessment procedure involving a multi-disciplinary team

In order to get an official decision, a child needs to be referred to the District Committees of Special Needs Education. The committees appoint multi-disciplinary teams to assess the child in order to decide whether they are eligible for support.

The multi-disciplinary team includes members from within and external to the pupil’s school

Depending on the child’s individual case, multi-disciplinary teams may comprise classroom teachers, special education teachers, speech therapists, educational or clinical psychologists, doctors, neurologists, physiotherapists, occupational therapists and any other professional needed.
There is a legal document which describes the support the pupil is eligible to receive and which is used as the basis for planning

District Committees’ official decisions – which are considered to be legal documents – report the kind of support a child requires, as well as the educational placement that is most suitable for their needs.

Immediately after the official decision is taken, the Ministry of Education and Culture assigns a Special Education Co-ordinator to monitor the child’s progress and the implementation of the Individual Education Plan.

The official decision is subject to a formal, regular review process

According to the aforementioned law, children are re-assessed every two years, or earlier if needed.

Proxy indicator(s) for the 80% benchmark used for the country’s data collection

Placement in a mainstream class implies over 80% or more with non-disabled peers.

Details on what the country proxy is:

Placement in a mainstream class implies over 80% or more with non-disabled peers. The data reported does not include children with SEN who attend mainstream classrooms but are supported for ten or more teaching periods outside the classroom, children with SEN in special classes and special schools and children who are not considered to have SEN, but attend literacy programmes (ten support teaching periods).

When a child receives ten support teaching periods per week (10/35), it means that they are out of the classroom for 28.57% of the time.

Detailed description of what is meant by ‘out of formal education’ within the country’s data collection

The 2011 International Standard Classification of Education (ISCED) defines Formal Education as follows:

[...] education that is institutionalised, intentional and planned through public organizations and recognised private bodies and, – in their totality – constitute the formal education system of a country. Formal education programmes are thus recognised as such by the relevant national education or equivalent authorities, e.g. any other institution in cooperation with the national or sub-national educational authorities. Formal education consists mostly of initial education [...] Vocational education, special needs education and some parts of adult education are often recognised as being part of the formal education system. Qualifications from formal education are by definition recognised and, therefore, are within the scope of ISCED. Institutionalised education occurs when an organization provides structured educational arrangements, such as student-teacher relationships and/or

**Information on pupils considered out of education (i.e. those not in formal education as per the ISCED definition):**

Children not in formal education are considered out of education. It is not possible to provide this kind of data.

**Country definitions of formal, non-formal and informal education:**

Formal education is defined as above. Home-educated pupils are considered to be in formal education.

**Provision of data on private sector education**

The data collection covers all sectors of education, including numbers for the pupil population in the private sector.

The tables on ‘Population and enrolment’ and ‘Age sample’ include data on the public and private sectors. Data on SEN in the private sector is not available.

**Private sector education in the country:**

The private sector refers to private schools that are established by the approval of the Minister of Education and Culture and operate under specific legislation.
