

Renaud, P. (2011) Les adaptations informatiques à l'épreuve d'un changement de paradigme [The use of information technology in adapting to changing paradigms] Nouvelle revue de l'adaptation et de la scolarisation, 54

Abstract

Information technology has clearly shown its relevance as a response to the particular needs of people with disabilities. Many adaptations have been proposed, tested and improved over time, accompanying the development of operating systems and software, as well as the emergence of configurations and diversification of use. These adaptations are well known and mastered by professionals. They are now challenged by two recent developments: mobility and tactile factors.
